

BRIEF INSTRUCTIONS FOR MEASURING TUSH HOGS

All measurements must be made with a flexible steel tape and recorded to the nearest one-sixteenth of an inch. Calipers or a skull box may be used. To simplify addition, please enter fractional figures in sixteenths and in proper fractions.

All adhering flesh, membrane, and cartilage **MUST** be completely removed before the drying period begins and official measurements are taken. The upper and lower tushes (Tusks) must be removed entirely for measurements.

A. Greatest Length is measured between perpendiculars at right angles to the long axis of the skull without the lower jaw, and **EXCLUDING** malformations.
(Normal teeth are included)

B. Greatest Width is measured between perpendiculars at right angles to the long axis.

C. Lower Tushes are measured along the outside curve from bottom to tip to the nearest sixteenth of an inch.

D. Upper Tushes are measured along the inside flat of the cutting edge from bottom to tip to the nearest sixteenth of an inch.

Place total of Tush lengths in **Box E**.

ENTRY REQUIREMENTS

1. Original scoring form completed by an Official Measurer of the Texas Bowhunting & Bowfishing Records, the Pope & Young Club, or the Boone & Crockett Club.
2. Completed *Fair Chase Affidavit*
3. Completed *Harvest Data Form*.
4. Three photos of skull (a front side, left side and a right side. A field photo is also requested, if possible.) The front view is best taken from above at a 45-degree angle.
5. A \$5.00 recording fee. (Make payable to the TBBR)

Drying Period: To be eligible for entry in the TBBR, a trophy must first have been stored under normal room temperature and humidity for at least 60 days after date of kill. No trophy will be considered which has been altered in any way from its natural state.
